

# ROWHEELS PEDIATRIC REV WHEELS

## Why Rowheels?

Rowheels REV Wheels pull-based propulsion technology minimizes the factors contributing to shoulder and wrist injury and pain. Kids driving a chair with Rowheels pull on the handrim to go forwards (backwards by pushing) using their larger and more capable back and shoulder muscles. The bio-mechanics of *Rowheeling* **protects** their developing upper bodies from injury and poor posture, keeping them **healthy** and **active**. REV wheels are ergonomic, durable, seamlessly functional and visually appealing.

## REV-LX Wheels Make Wheelchair Use Easier

REV-LX wheels are designed to reduce the force needed to propel a wheelchair by 25% compared to standard wheels. Kids want to be able to participate in as many activities as possible and with REV-LX wheels, going up ramps/inclines or traversing rough terrain becomes an easier task for them!

## Growth? Not A Problem

REV pediatric wheels are available in a 22" (489mm) wheel size but we understand that kids will grow. REV wheels are designed so the wheel rim size can be changed with a child's growing needs. Just send us back the wheels and we can turn them into 24" or 25" wheels!\*

## Kid-Friendly And Compatible

REV-LX wheels are quick-release making them easy to take off and put on. Our latch clamp system makes engaging the reverse drive system as easy as pulling back on the handrims until the wheel's engagement pin is captured by the latch. REV wheels are compatible with popular K5 pediatric chairs like the TiLite *Twist*, Quickies' *Zippy Zone*, *GS*, *X'CAPE* and *Zippie 2*, Ki Mobility's *Rouge XP*, *Little Wave* and *Spark* and *Colours Chump*.

## Customizable

REV pediatric wheels can be fitted with a variety of popular handrim and tire options. Our wheels come standard with red, white or black hubs but can be customized with a variety of hydrographics for the tri-spoke hub as well as different colors or designs for the hub and spoke/finger guard\*.

## Reimbursable

REV pediatric wheels are covered by Medicaid, Medicare, and private insurance through HCPCS billing code E2227.
